

NT Minerals and Energy InfoCentre

The Northern Territory Geological Survey (NTGS) is the primary source of information, data and knowledge about the geology of the Northern Territory (NT).

The Minerals and Energy InfoCentre in NTGS manages and distributes geoscience information to support and promote mineral and energy exploration activities in the Northern Territory.

Resources

Minerals and petroleum industry exploration reports, data and samples

- Well and drillhole reports and data
- Geophysical and geochemical data, seismic and other geophysical survey reports and data
- Core and cuttings reports and data

Northern Territory Geological Survey products

- Geoscientific and commodity reports
- Geological maps, explanatory notes and GIS datasets
- Geophysical survey and Hylogger data and interpretations
- AGES Proceedings
- Geochemical and resource datasets

Minerals and Energy Library Collection

- Digital and printed maps, journals, aerial photographs, government reports and books, covering Northern Territory geoscience and geology, including historical records of geological and mining exploration in the Northern Territory

For more information go to <https://nt.gov.au/industry/mining-and-petroleum/geoscience-data-maps>

Online access

Databases and online systems provide access and free download to a range of information

From our website www.minerals.nt.gov.au/ntgs you can:

- Use STRIKE for viewing and downloading geoscientific and titles data
- Use GEMIS to find and download mineral exploration industry reports and data, petroleum geophysics and well reports, core sample reports and NTGS products
- Search PEX for details of other petroleum exploration reports
- Search Coredat for details on drill core and cuttings held in the NTGS core stores
- Access the library catalogue

Enquires and requests
